

Learning about a new medicine
for malaria

A story starring
you!

Babies all around the world
can get malaria, just like you.

What is malaria?

Malaria is a sickness that can spread to people from a mosquito bite. It can give you a fever and cough.

When you were a baby, you helped doctors learn about a new medicine.

You and 27 other babies with malaria got the new medicine. All the babies were 6 months old or younger.

You went to the doctor to get the new medicine. They checked how much of the new medicine was in your body and in the other babies, too.

The doctors learned that you and the other babies had about as much medicine in your bodies as they expected.

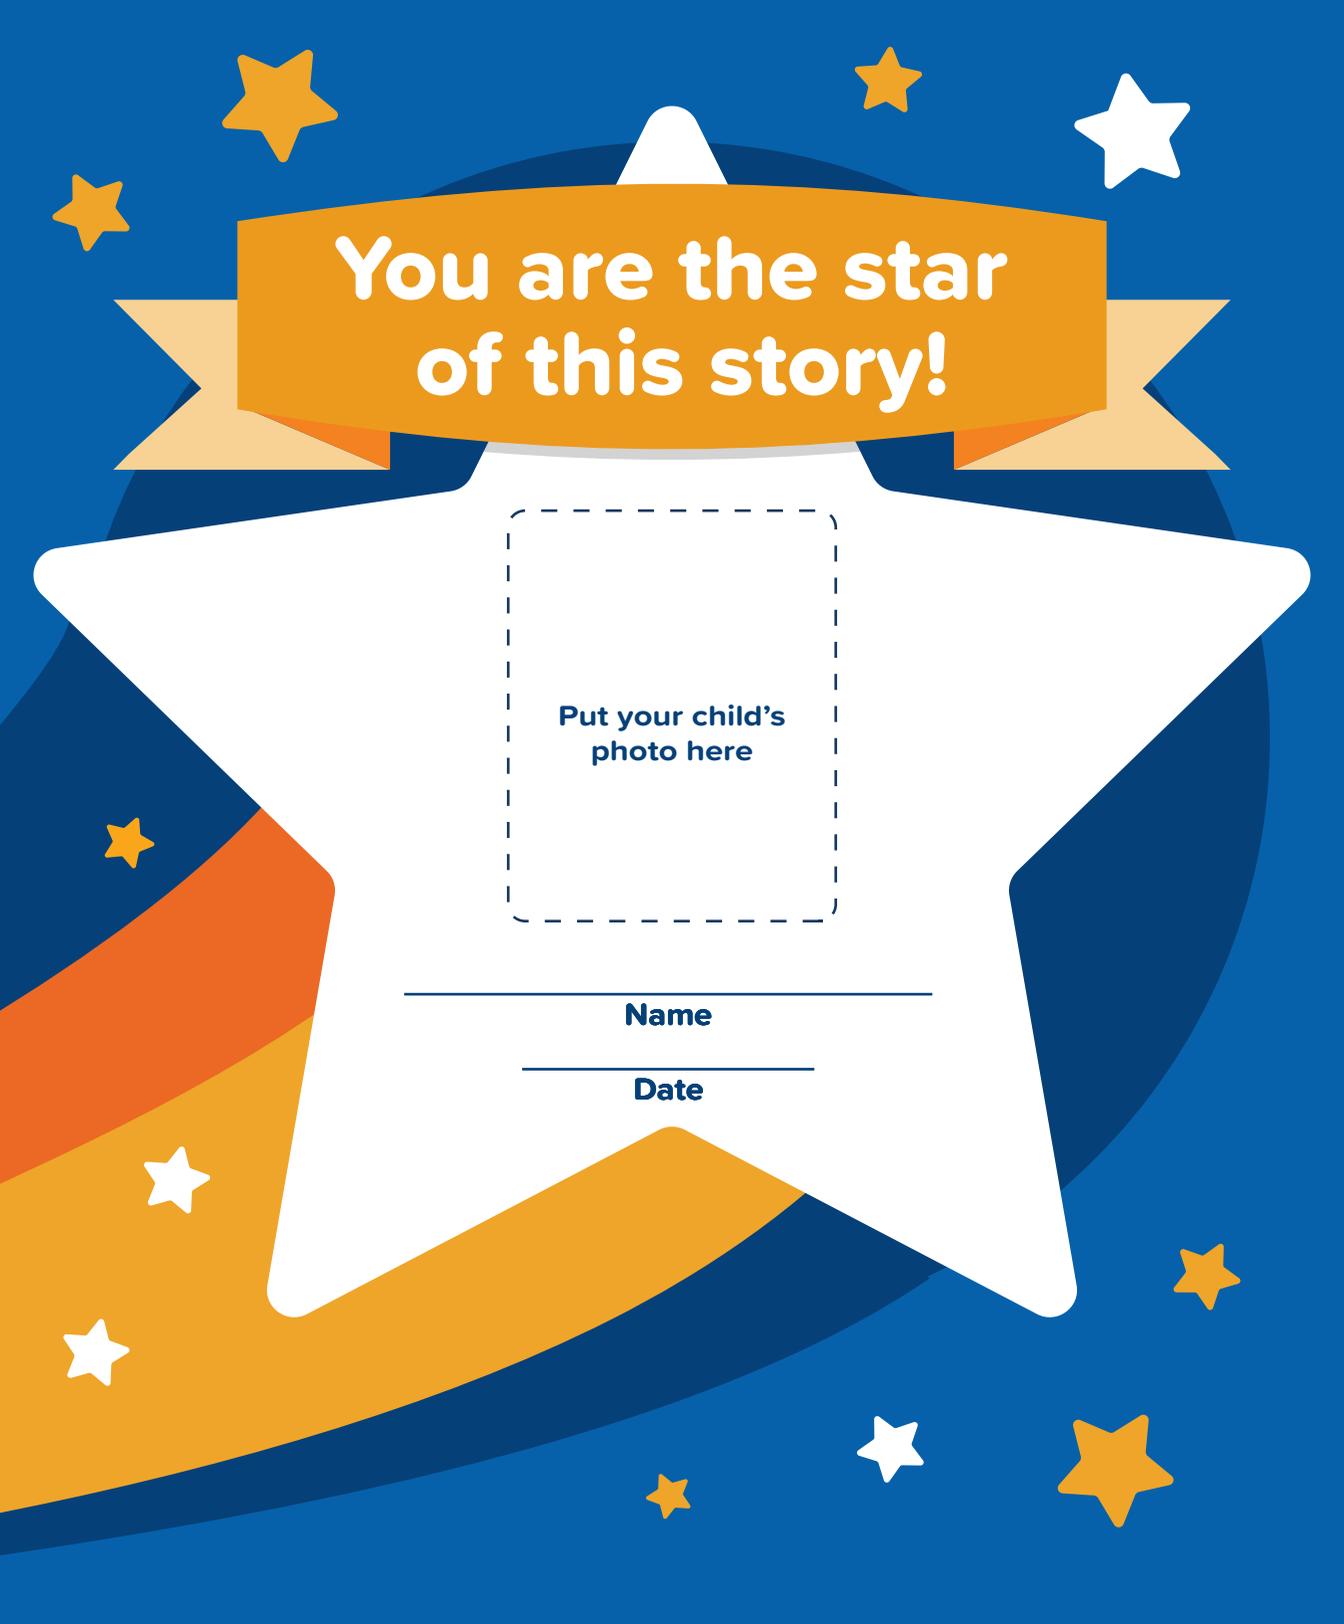

Thank you!

Thank you for taking part in this clinical trial!

You helped us learn about a new medicine that could treat babies with malaria in the future.

If you have questions about the trial, please ask your parents and doctor.
